

Network Programming (CMPU3027)

LAB 04

1. Modify the program “Construct a Date by talking to time.nist.gov”, see lecture-03 slides. In class we have done it using TCP/IP and now you have to modify it and get time by using UDP protocol. The server IP and port number is same.

Note: Maybe you get exception, error or unrecognized output because of Network Restriction, Firewall, UDP Server Down so I am mainly interested in looking at source code only.
